

Quality education: changing needs and widening participation

György Purebl MD, PhD
Institute of Behavioural Sciences

Generation Z

- Born between 1995–2010

Rather simplistic and
stigmatizing labels

“Facebook generation”

“Internet generation”

“Digital native generation”

Socio-demographics

compared to previous age cohorts

- data derived from high and medium income countries*
- Highest maternal age
- Smaller size families
- Smallest existing age cohorts

Main characteristics

Z is more diverse than any other generation!

- Fast, instant-minded and short-term focused
- Social media probably the most significant communication channel
- Lack of traditional ambitions
- Lack of interpersonal problem-solving skills
- Different attitude toward privacy and intimacy
- Success orientation and avoidance together
- High dependency on technology, as part of identity
- Very concerned about environmental issues with a high sense of responsibility
- Vulnerability
- Vulnerability

Dolot, A. (2018). *E-mentor*, 74(2), 44–50

Singh, A. P., & Dangmei, J. (2016). *South-Asian J Multidisciplinary Studies*, 3(3), 1–5.

Some psychological features

- Practical, solution-focused thinking
- Suberb technical skills
- High level of abstract thinking
- Better attentional skills (and higher frequency of attentional problems)
- Ability of dealing with high amounts of information
- Lower level of reading skills (and the preference of visuals, not texts)
- More frequent experience of loneliness, solitude and alienation
- Eager for fast satisfaction and fast success
- Failure sensitivity and avoidance
- Higher frequency of conflict-solving problems
- Higher frequency of emotion-regulation problems

Dolot, A. (2018). *E-mentor*, 74(2), 44–50

Singh, A. P., & Dangmei, J. (2016). *South-Asian J Multidisciplinary Studies*, 3(3), 1–5.

Higher frequency of mental disorders*

*the frequency of mental disorders is generally increasing in all age cohorts

- Five-fold increase of mental disorders amongst UK university students between 2007–2018
- Medical universities: SR and MA of 167 cross-sectional studies (n = 116 628) and 16 longitudinal studies (n = 5728) from 43 countries:
- depressive symptoms among medical students was 27.2% and that of suicidal ideation was 11.1%.

Gunnell et al BMJ 2018; 361:k2608

Rotenstein et al (2016) Jama, 316(21), 2214–2236.

- The discrepancy between ambitions and resources
- dissatisfaction, frustration, anger

- More time spent in virtual world than in real
- limited experience with interpersonal skills and emotion-regulation

Social comparison

- Desire of fast success with high failure sensitivity and avoidance
- anxiety, low self-esteem, depression

- Anticipation of an unpredictable, dystopian future
- anxiety, hopelessness, depression

Some psychological features

Good combination for becoming outstanding professionals

- Practical, solution-oriented, smart thinking
- Fast, capable of dealing with high amounts of information
- Advanced ICT expertise
- Uncertain
- Anxious
- Doubtful
- Emotional
- Empathy
- The motivation to help others
- Sensitivity for human problems

appropriate support needed

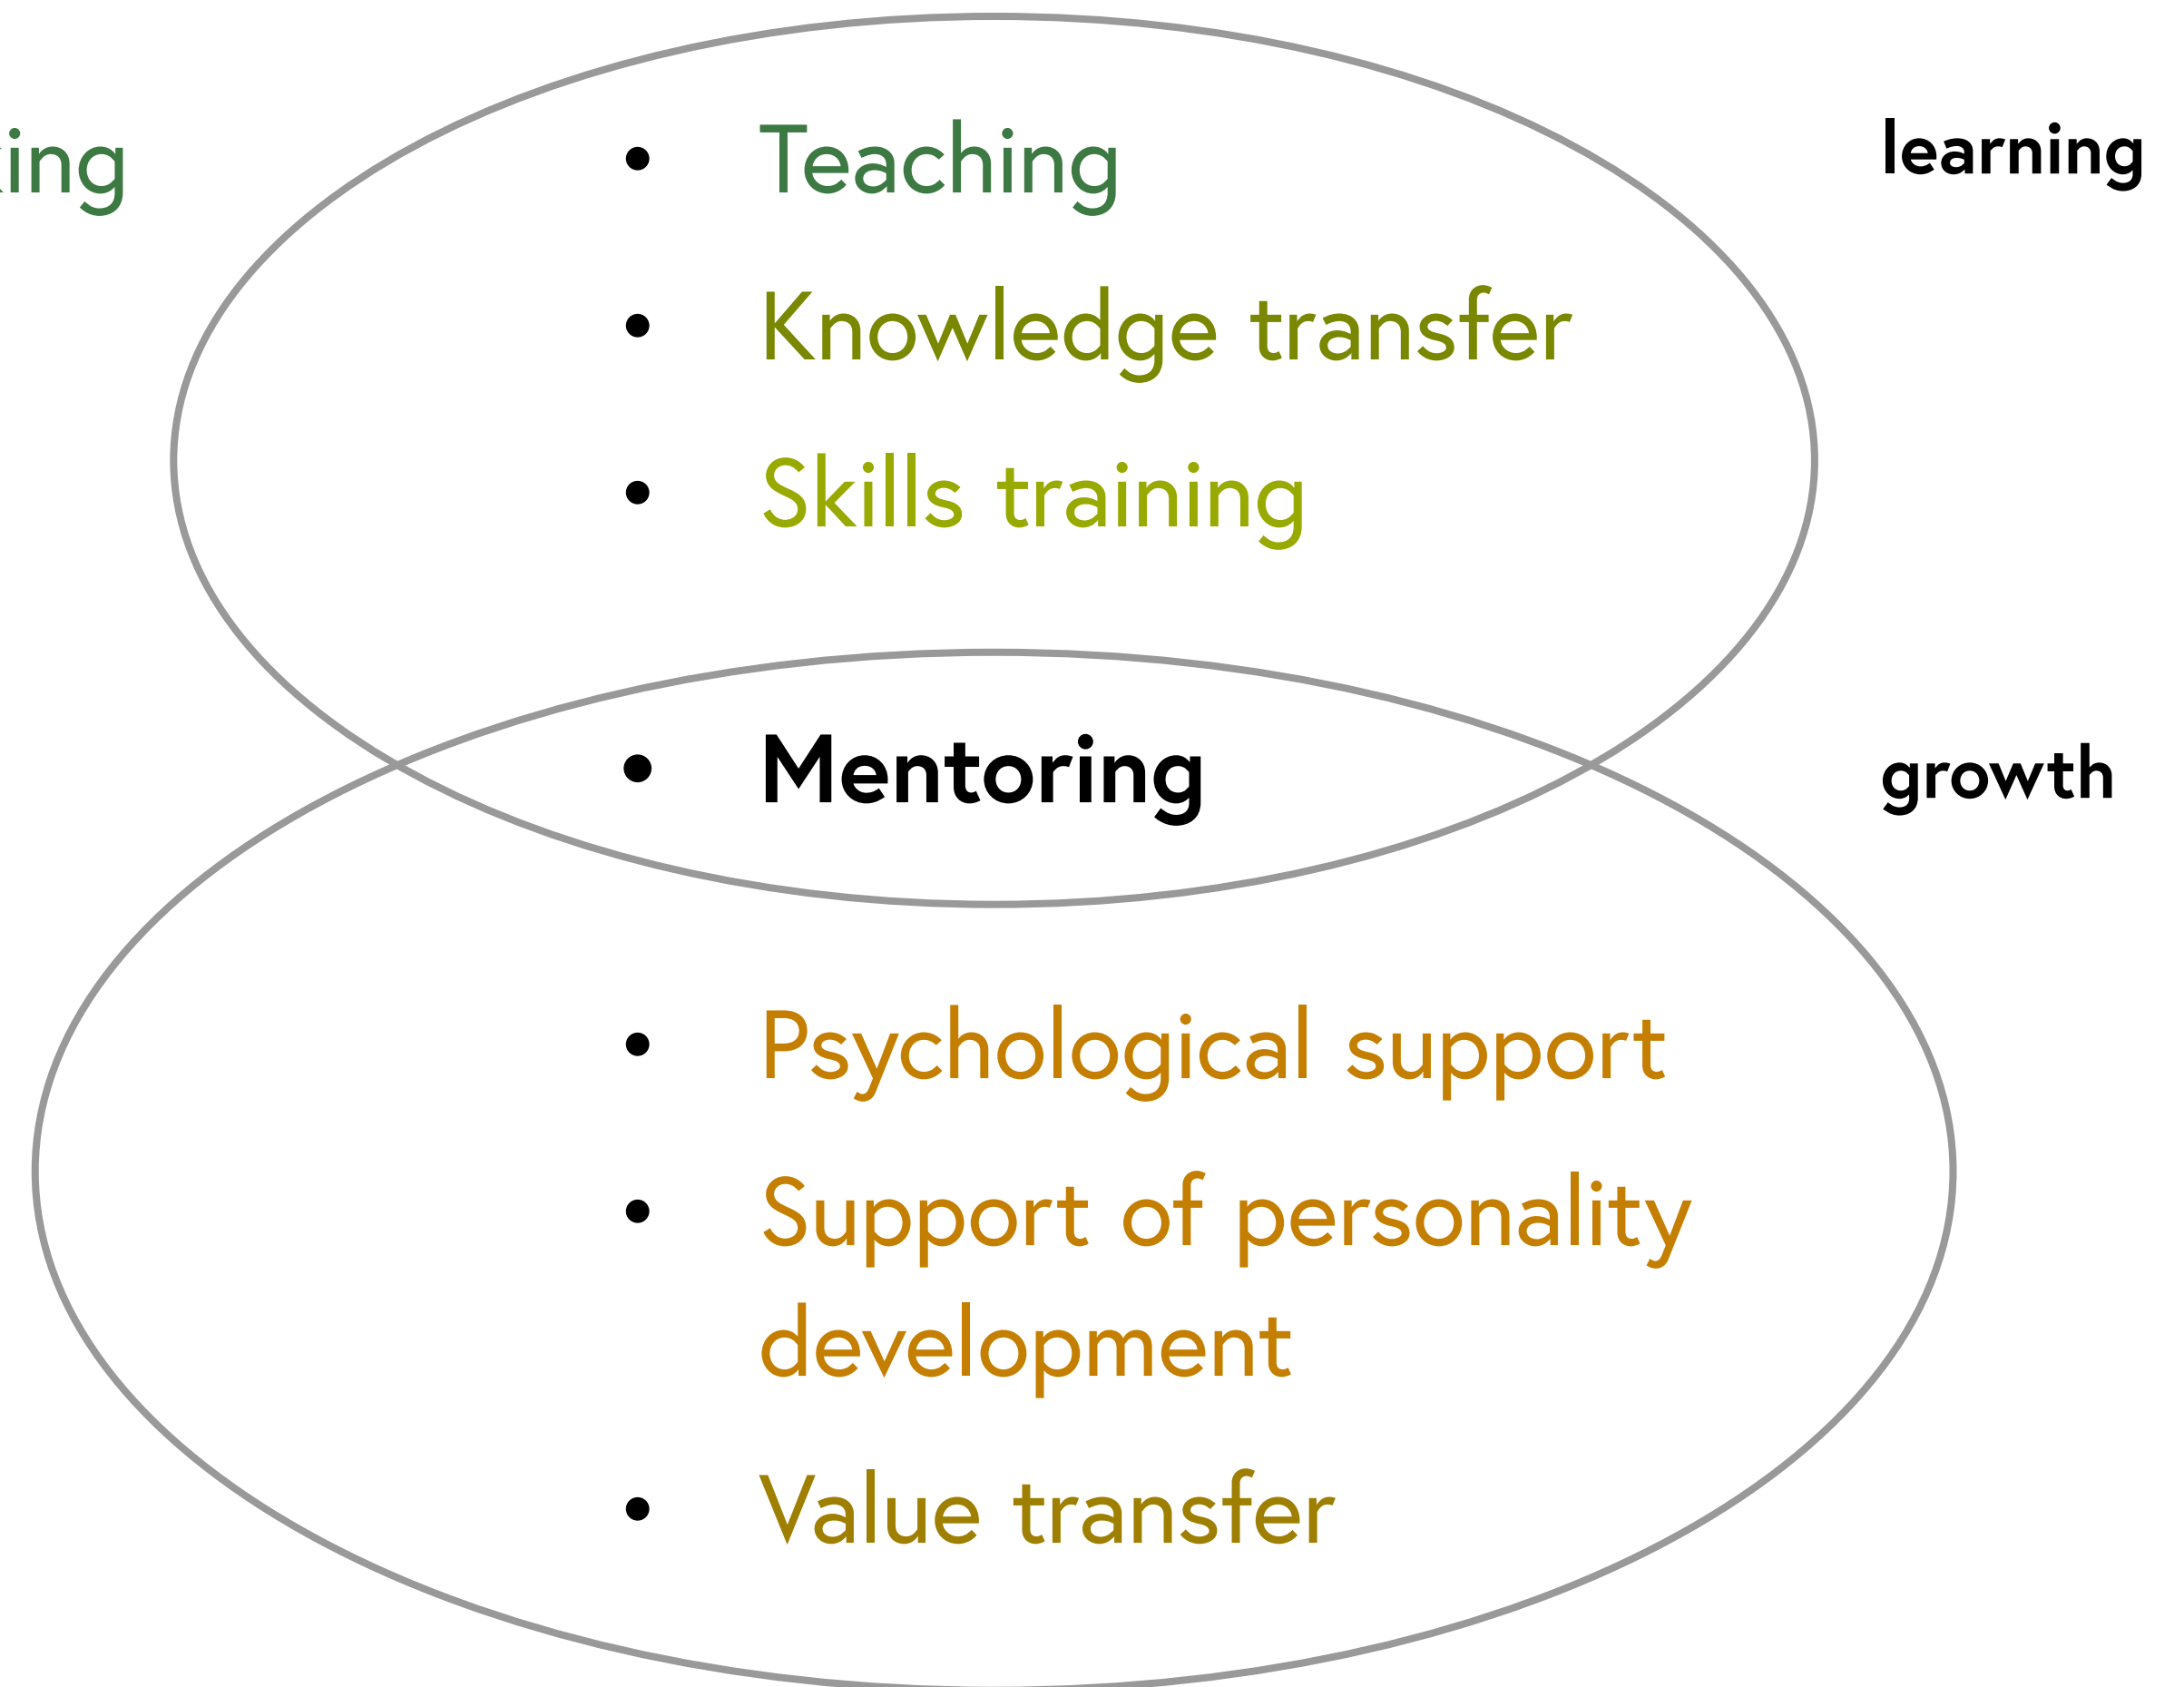

Education

- Practical, solution-oriented, smart thinking
- Fast, capable of dealing with high amounts of information
- Advanced ICT expertise

- Uncertain
- Anxious
- Doubtful
- Emotional

appropriate support needed

Teaching

- Knowledge is everywhere
- Knowledge can be anywhere
- Knowledge ... where?

XX. Century Millenium XXI. Century

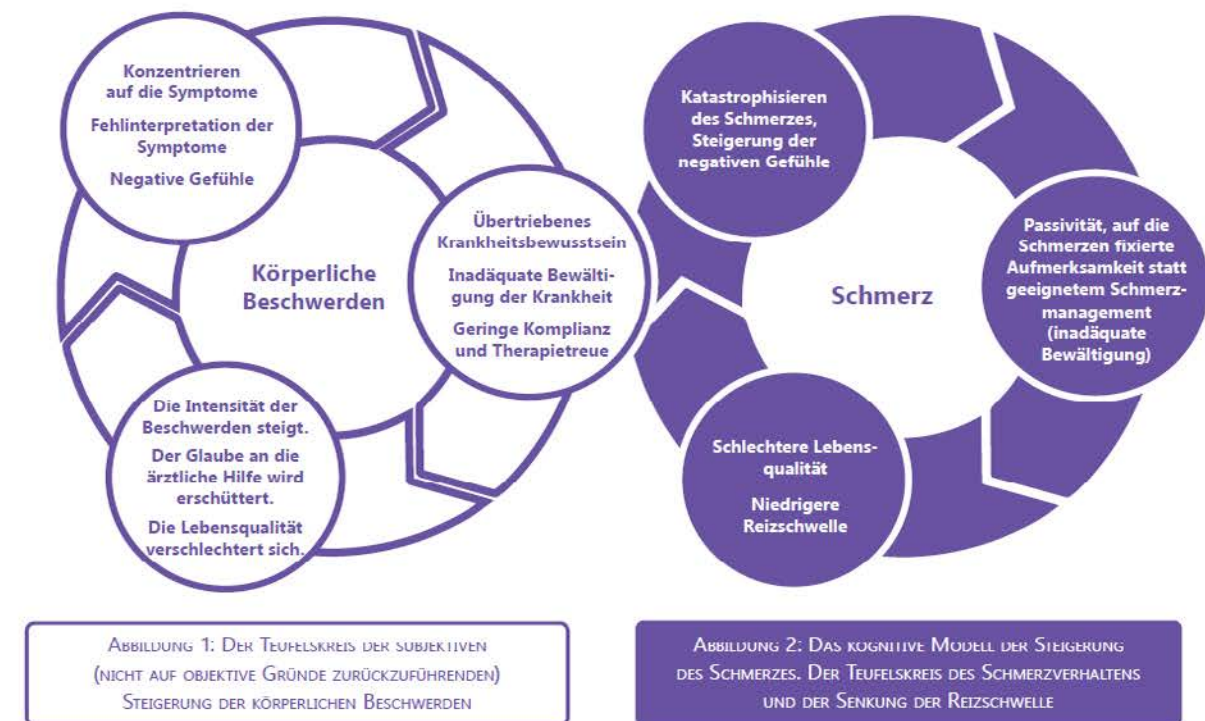

E-learning and experience-based learning

- Interactivity
- Problem-based learning

E-learning and experience-based learning

- Zoom seminars are not E-learning!!!
- E-learning:
- Digital textbooks with a dominance of infographics

TECHNIKEN UND ÜBUNGEN

„VORHERSAGENDE“ STATT „AUSCHLIEßENDER“ KOMMUNIKATION

- Geben Sie dem Patienten vom ersten Augenblick der Untersuchung an zu verstehen, dass Sie ihn zwar sehr gründlich untersuchen werden, weil es wichtig ist, gefährliche Ursachen auszuschließen, es aber überhaupt nicht sicher ist, dass eine organische Ursache gefunden wird, was Grund zur Freude wäre.
- Das liegt daran, dass auch zahlreiche nicht konkrete Dinge die Beschwerden verursachen können, in den meisten Fällen Stress.
- Vermeiden Sie es, von „seelischen“ oder „psychischen“ Auslösern zu sprechen, denn das löst bei sehr vielen Menschen Widerstand aus. Beschwerden in Verbindung mit Stress (als Erklärung) haben eine viel höhere kulturelle Akzeptanz, operieren Sie also lieber damit.
- Betonen Sie, dass körperliche Beschwerden ohne körperliche Veränderungen alltäglich und häufig sind, und sagen Sie dem Patienten auf keinen Fall, dass er nichts hat – das glaubt er Ihnen sowieso nicht (schließlich hat er etwas, nur hat das keine organische Ursache).

WAS SIE AUF JEDEN FALL MITTEILEN MÜSSEN (EDUKATION)

- Eine stark vereinfachte Beschreibung der Schmerztor-/Neuromatrixtheorie: Wie weit ein Schmerztor geöffnet wird (wie stark man also den Schmerz empfindet), bestimmt auch das Gehirn, in erster Linie das Ausmaß, in dem sich die betroffene Person wegen des Schmerzes Sorgen macht. (Das heißt, Denken und Gefühle haben auch einen Einfluss.)
- Die erhöhte Aufmerksamkeit in Verbindung mit dem Schmerz verringert die Schmerzgrenze (verwenden Sie Abbildung 2).
- Eine passive, schmerzorientierte Lebensweise erhöht die Aufmerksamkeit für den Schmerz (verwenden Sie auch hier Abbildung 2).
- Die Bewältigung des Schmerzes ist im Sinne der vorangehenden Ausführungen immer ein aktiver Prozess.
- Fragen Sie den Patienten, welche Gedanken seiner Meinung nach seine Schmerzgrenze senken können (und somit

E-learning and experience-based learning

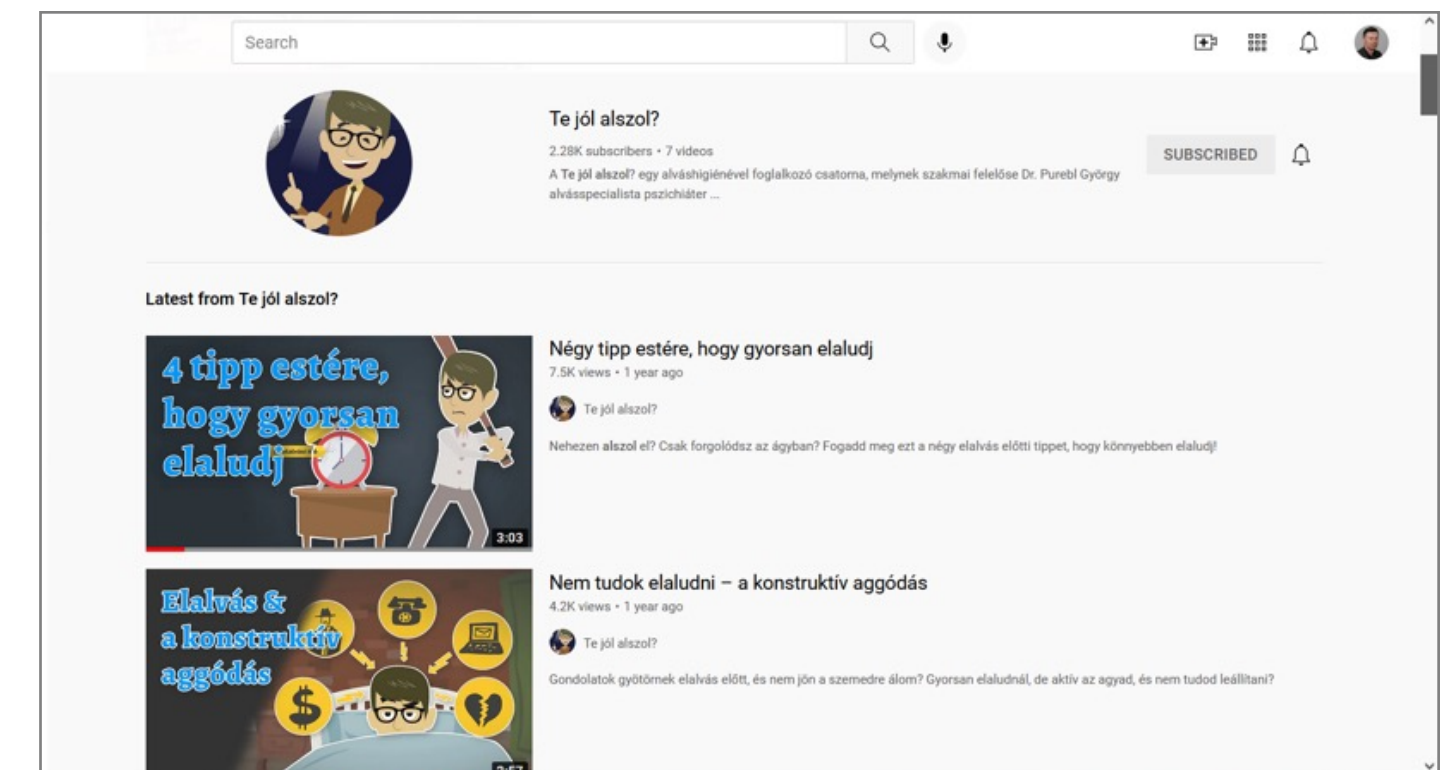

- Zoom seminars are not E-learning!!!
- E-learning:
- Digital textbooks with a dominance of infographics
- Digital training programs with problem-solving tasks
- Gamified training programs

E-learning and experience-based learning

- Zoom seminars are not E-learning!!!
- E-learning:
- Digital textbooks with a dominance of infographics
- Digital training programs with problem-solving tasks
- Gamified training programs
- Multimedia materials
- Digital library, online publishing house
- Mobile applications

REMEMBER:
Visual design
is (almost)
everything!!!

Lectures

You can make it part of the lecture...

Control the dripstone building in curriculum

- Recent, updated knowledge
- Still in practice
- Outdated yet significant
- Outdated
- History

Coping with difficulties and supporting personal development

Some psychological features

- Practical, utilitarian, smart thinking
- Fast, capable of dealing with high amounts of information
- Advanced ICT expertise
- Uncertain
- Anxious
- Doubtful
- Emotional
- Empathy
- The motivation to help others
- Sensitivity for human problems

Mentoring – the 4 “How...”s

- “How to do...” – teach practical skills
- “How to deal with...” – show how to handle difficult situation in practice
- “How to cope with...” – demonstrate as personal role model, how to handle work-related stress
- “How to manage...” demonstrate how to do all of these together in his / her personal work

Mentoring is the gold standard in human history

Upper class peer mentoring and peer support

- Introduction to community life
- Practical help
- Emotional and stress management support
- Awareness and first response of emotional disturbances
- Community building

Continous training
and supervision

Upper class peer mentoring and peer support

For mentees:

- Receiving help in socialization
- Receiving support
- Learning stress management from mentors
- Learning coping strategies
- Socialisation to become a mentor him / herself

For peer mentors:

- Learning to be a mentor
- Practicing mentoring
- Practicing emotional support to others
- Real life experiences
- Building self-esteem and confidence

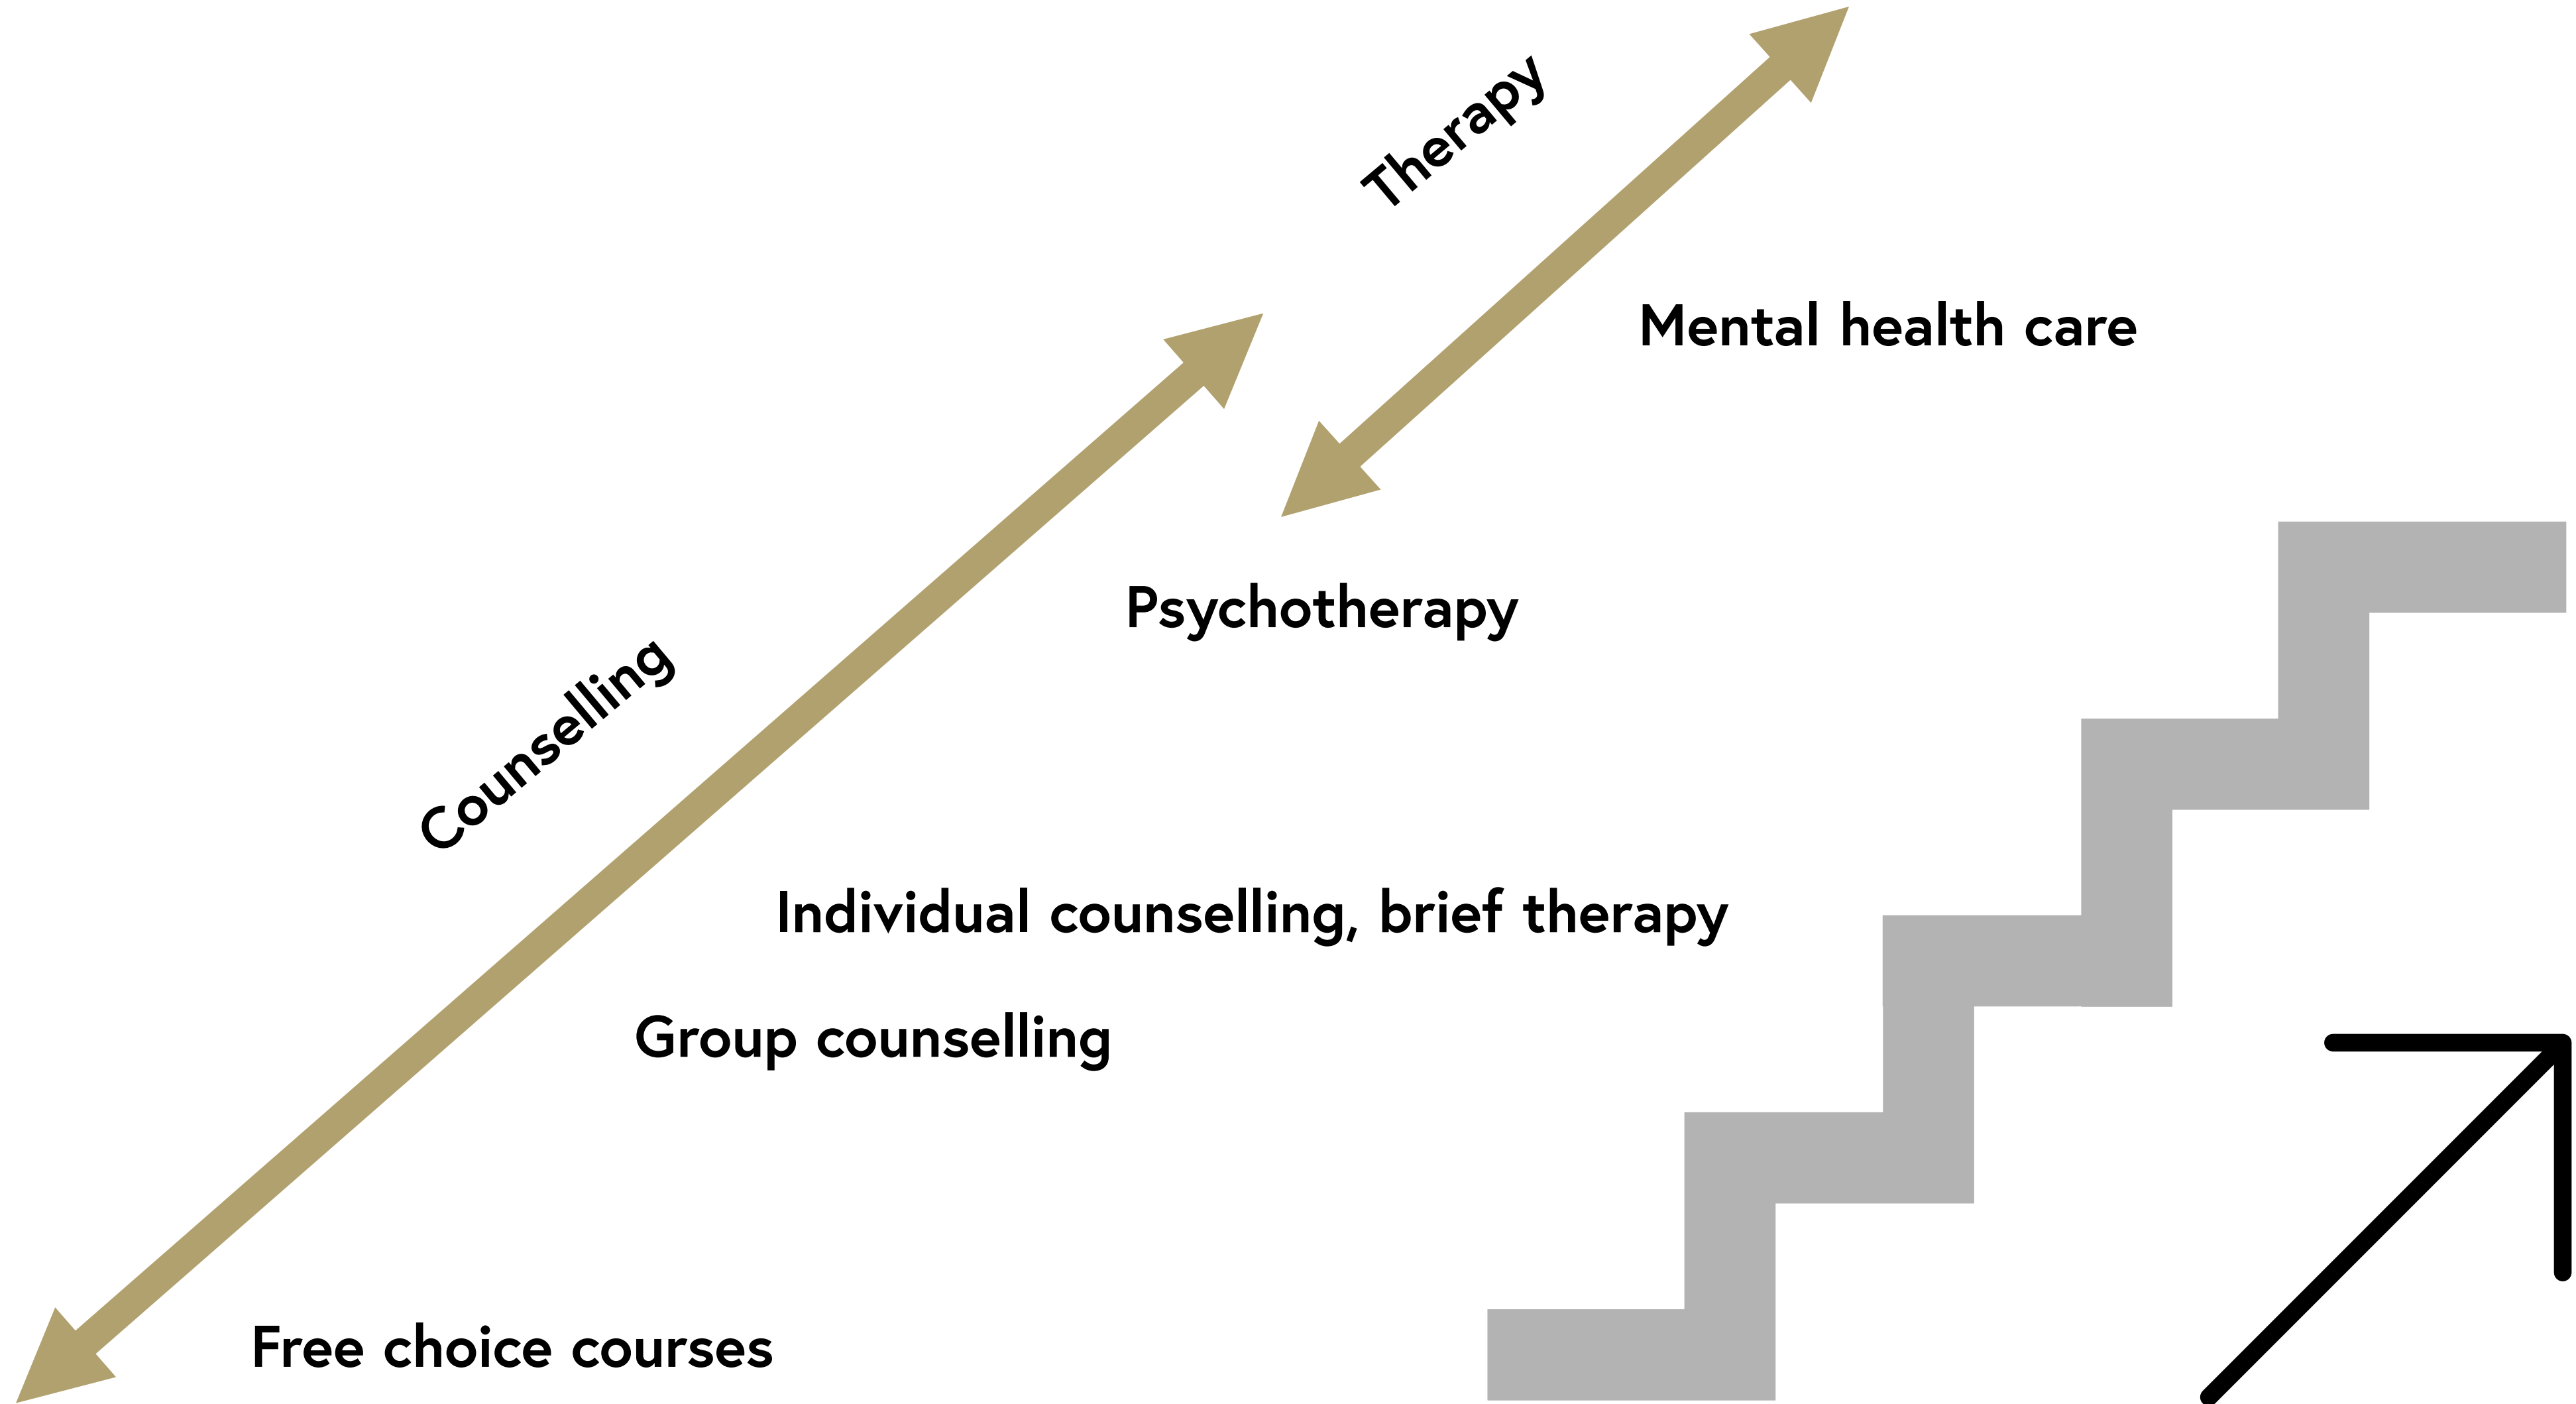

Personal skills group training programs for students

- Art of learning
- Stress management
- Conflict management
- Burnout prevention
- Self discovery groups
- Personal development groups
- Development of effective learning skills
- Development of effective stress-management and emotion regulation skills
- Work-related conflict management
- Burnout prevention through lifestyle factors and personal psychological skills
- Development of self-awareness

Student counselling and psychological support

- Professional help for students with psychological difficulties
- Stepped care model
- Individual and/ or group settings
- Prevention (or early treatment) of mental disorders
- Avoid stigmatization

Novel set of teachers' skills

- Digital expertise
- Psychological skills 1. Motivation and learning support
- Psychological skills 2. Recognition of distress and emotional difficulties
- Psychological skills 3. Low intensity psychological interventions (psychological first aid, decatastrophisation, motivational interviewing etc)
- Mentoring skills (from paternalism to partnership)
- SOP for oral examination

Education

learning

- Teaching
- Knowledge transfer
- Skills training

Mentoring

- Psychological support
- Support of personality development
- Value transfer

growth

Education

Obtaining the professional knowledge and skills

- More visuals
- Skills training
- Problem-based learning
- Gamification
- Online libraries and publishing houses

Mentoring

- Peer mentoring and peer support programs
- Personal development group trainings
- Student counselling

Being prepared to endure the challenges and difficulties

Thank you for your attention!

György Purebl MD, PhD
